Notes:

- Amplitudes are zero-to-peak, (ie, 50% of peak-to-peak).;  $V = A \times \sin(2 \pi f t)$
- Maximum slew rate for sine wave at frequency "f" and amplitude A given by  $(dV/dt) = 2 \pi f A$
- FPBW = Full-Power Bandwidth (ie, maximum frequency for  $\pm 1$  V input or  $\pm 10$  V output)
- All values shown are typical
